<b>RESEARCH INTERESTS</b>	Microeconomic Theory, Game Theory, Social Choice, Axiomatic Bankruptcy, Industrial Organization	
<b>WORKING PAPERS</b>	1. Iterative Elimination with Recall Abstract: We define an elimination process which requires weaker rationality than the conventional one. We establish that the mechanism is order independent whenever iterative elimination of weakly dominated strategies is so. It also produces the same set of remaining strategies whenever transference of decision maker indifference (TDI) defined in Marx and Swinkels (1997) holds.	
	2. A Characterization of The Proportional Rule Abstract: We define union-consistency of allocations in bankruptcy problems and establish that proportional division is the only rule satisfying it.	
	3. Condorcet winner in Hedonic Coalition Formation Games with Seçkin Özbilen
